ARCHITECT (MID-LEVEL) REQUIREMENTS AND QUALIFICATIONS:

- Professional Architectural Support: Bachelor Degree in a National Council of Architecture Registration Boards (NCARB) accredited Architectural program or approved equivalent experience and minimum of 10 years of architectural design preferably with at least 1 year working on facilities projects for a Federal Agency.
- Registration as a Registered Architect (RA) is desirable.
- A minimum of 10 years of professional, architectural code compliant facilities design experience for new construction, including renovation design experience, is required.
- Completion of a course of studies accredited by the National Architectural Accrediting Board (NAAB) for an architectural program from a college or university earning a bachelor's or master's degree in Architecture, supplemented by a considerable amount of hands-on facilities design experience, is desired.
- Provide timely, professional architectural support, services and consultation for the planning, design, construction and maintenance of facilities for the Navy, Marine Corps, and other Supported Commands, including specific projects, special projects, military construction (MILCON), demolition, maintenance, space utilization and facilities development. Participate in conferences with project stakeholders and collaborates with other engineering and architectural disciplines to ensure system coordination and integration with specific project requirements.
- Support services include, but are not limited to, input and feedback on third party designs, and recommendations with respect to programming, space planning, concept design, development, sustainable practices and codes compliance assurance to include analysis of furnished drawings and specifications, review of cost estimates and other required services. The professional services provided will be part of a Navy team that supports the following facility types: housing; community support facilities (dining hall, clubs, fitness centers, child development centers); medical facilities; education/training facilities; maintenance shops; industrial facilities; hangars; administration buildings; operations buildings (command and control centers); and other shore installation facilities.
- Broad professional knowledge and skill in architectural concepts, theories, principles, practices, and techniques necessary to plan, design, manage, preserve, restore, rehab, oversee, and maintain a wide range of shore installation facilities projects.
- Professional knowledge and experience in architectural design demonstrating comprehensive knowledge of all phases of architectural design, including architectural programming, space planning, concept design development, sustainable design, design analyses, compliance with codes and standards, drawings, specifications, cost estimates, other required services.
- Preferred knowledge of DoD and Navy guide specifications, criteria, and policy; the International Building Code; Life Safety Code, industry codes and standards; and standard practices as related to architectural design.
- Knowledge of local, state, federal, and foreign country laws, codes, and other statutory requirements affecting architectural design throughout the NAVFAC Southeast area of responsibility (AOR).

- Knowledge of related architectural and engineering fields and their associated impacts as related to architectural design.
- Knowledge and experience with AutoCAD, Revit, Microsoft Office products, architectural design and analysis software, and other applicable DoD computer systems and software used by the Command.
- Ability to produce results of analysis in writing; review and consolidate findings of others; and evaluate recommendations and facts. Ability to make oral presentations of proposed designs and results of studies.
- Knowledge of budgeting, planning and project management techniques, including the ability to coordinate the work of others and lead teams.
- Knowledge of and full compliance with Safety Policy and Guidance, and use of personal protective equipment.
